

and Nature' (it has had several titles), and are very effective and for the most part quite satisfactory as a means of identifying the species figured. The faulty taxidermy of some of the specimens chosen for illustration rather mars their appearance for those who know how a bird really looks in nature. The work, however, is worthy of a cordial welcome and should aid substantially in popularizing bird study. — J. A. A.

ERRATUM.—The cut illustrating Mr. Felger's paper in the April number (*antea*, p. 193) was unfortunately inserted upside down, the holes for binding shown in the cut, seeming to indicate that edge as the left hand edge of the sheet. The author (who did not see the proof), however, informs us the cut should be inverted, bringing the open spaces at the op.—EDD.
